

ECHOSTOR BACKUP-AS-A-SERVICE

Service

EchoStor Technologies EVA (BaaS) is a comprehensive direct to cloud backup as a service that offers data protection for your critical applications. EVA encompasses data protection for your data center & cloud workloads, endpoints and SaaS applications.

Value Added

Data protected on the EVA platform is available for recoveries anytime and anywhere. Your team can globally analyze all protected data on the EVA platform (regardless of source) and act on your corporate data compliance and data governance. Perform eDiscovery and legal holds with ease to meet requests from your legal team. Analyze data patterns for the presence of Ransomware on any device or workload.

Offering

EVA provides a direct to cloud model to assist your team in ramping up your data protection landscape into the EVA platform. We work hand-in-hand with you on integrating your SaaS applications, endpoints and data center workloads with the EVA platform.
