AWS FSxN

MANAGED STORAGE SERVICE

AWS FSxN is a managed storage service that includes all the features of on-premises ONTAP, enabling customers to leverage the power and familiarity of ONTAP, along with the simplicity, agility, and scalability of AWS. Extend, replicate, and migrate into AWS at higher velocity with lower risk, and eliminate the choice between capability, performance, and support of AWS and third-party NAS solutions.

Leverage fast performance and rich feature sets of commercially licensed file systems while avoiding time-consuming administrative tasks such as patching and backups. Migrate workloads like-for-like from on-prem with no application or administrative workload changes are necessary.

ECHOSTOR PROFESSIONAL SERVICES

EchoStor's Professional Services team can help assess, deploy, and migrate your workloads onto FSxN:

Strategic Planning Service

Strategic Planning Service helps customers define their cloud strategy and roadmap, creating a framework that integrates cloud with their organization.

Cloud Engineering Services

Cloud Engineering Services help customers develop robust, integrated, scalable, secure platforms.

Migration & Modernization Services

Migration & Modernization Services ensures customers workloads, and their associated data successfully land in the cloud.

Optimization & Operation Services

Optimization & Operation Services ensures customer cloud adoption is secure, resilient and efficient.
