Azure Best Practices Assessment

EchoStor recognizes the unique and distinct nature of each Azure environment, understanding that different industries have different needs. Whether your organization is in the midst of a new migration or has been operating in Azure for some time, EchoStor is here to review and assess your current setup, providing valuable and actionable feedback.

Engagement Scope

EchoStor is committed to delivering a comprehensive report, detailing observations across various areas of your Azure environment and aligning them with Microsoft's best practices. The areas of focus include:

- Security
- Cost
- Availability
- Usage

From the customer, EchoStor requires read-only role permissions across the Azure subscription(s) to facilitate this assessment. With this access, the EchoStor team is ready and equipped to handle the rest!

Approach

Planning & Deployment

This initial phase includes a kickoff meeting and the deployment of discovery tools.

EchoStor Environment Discovery

The team engages in data collection, specifically targeting the Azure environment.

Best Practices Analysis

Thorough analysis of subscription resources and settings, identifying areas for improvement.

Review & Deliver

EchoStor reviews the findings, formulates recommendations, and provides a detailed deliverable to the customer.
